POWER SUPPLY:
The tool requires a 9V battery to operate (not included).

BATTERY INSTALLATION:
- Open battery compartment door.
- Insert new alkaline battery according to instructions.
- Close battery compartment door.

TECHNICAL SPECIFICATIONS:
- Dimensions: 6-13/16" x 2-3/4" x 1-3/16" (173mm x 70.1mm x 30mm)
- Weight (estimate): 3-1/2 oz / 100g (excluding battery)
- Batteries: 1 9V block battery (not included)
- Operating temperature: 32 °F to 104 °F (0 °C to 40 °C)
- Center Accuracy: ±1/4" for wood and metal studs
- Drywall thickness: Up to 1-1/2" (Metal Stud)
- Recommended use: Indoor

STUD FINDER
HOW TO USE YOUR STRAIT-LINE®...

1. First, slide the 3 position switch to the "On" position and start calibration. The tool requires a 9V battery to operate (not included).

2. Hold the Stud Finder in still position. Set or testing surface to approximately 5 seconds until the upper red LED is OFF and the "beep" sound stops. This indicates successful calibration. It is important that the unit is not moved during calibration phase.

3. To start scanning, hold Stud Finder on testing surface and slowly slide it sideways.

4. When stud edge is detected, the upper red LED will blink continuously. Replace with new battery according to instructions.

OWNER'S MANUAL

CAUTION:
- Remove battery if the tool is to be stored for an extended period of time.
- Keep the tool dry and clean.
- Check battery regularly to avoid deterioration.
- Avoid shock, vibrations and extreme heat.
- The Stud Finder is a precision instrument which must be handled with care.

IMPORTANT NOTES:
- Do not move the unit during calibration phase.
- When the unit is beeping continuously during calibration, you might have calibrated over a metal stud, and you might have calibrated over a stud and a piece of wiring or plumbing, but this tool is primarily designed for detecting wood and metal studs on drywall up to 1-1/2" deep. It is possible for the tool to detect studs or pipes that are not metal studs or pipes, but the tool is primarily designed for detecting wood and metal studs on drywall up to 1-1/2" deep.

IMPORTANT NOTE:
- When holding the unit, your hand should remain in contact with the testing surface.

WARNING:
- Each STRAIT-LINE® tool is warranted to be free from defects in material and workmanship for a period of one year from the date of purchase. During the warranty period, should the tool fail to operate under normal conditions and be deemed defective by the manufacturer, the manufacturer reserves the right to repair or replace the product.

STUD FINDER
OWNAER'S MANUAL

NOTE: The Stud Finder is designed for use on dry interior walls only. The tool requires one 9 volt battery to operate (not included). The tool is calibrated over a surface that exceeds the maximum scan depth and it may not detect studs or joists that are not metal studs or pipes. The tool is primarily designed for detecting wood and metal studs on drywall up to 1-1/2" deep. It is possible for the tool to detect studs or pipes that are not metal studs or pipes, but the tool is primarily designed for detecting wood and metal studs on drywall up to 1-1/2" deep.
